**Vacuum** - Oversized rerouted chamber for extra-clean pickup.

**Ball Bearings** - On all revolving parts, lubricated and sealed.

**Net Weight** - 30 lbs.

## SL-7 and SL-7D Floor Edgers

The Silver-Line SL-7 is the leader in floor edgers for one reason...it works!

### **The SL-7**

Designed and engineered to stand up to the toughest customer, the SL-7 delivers excellent results. It's built to give top performance on the toughest jobs.

The Powerful motor delivers 3600 RPM for the fast, smooth cutting you want.

The oversized vacuum fan and chamber work together to achieve superior dust pick up that will make your customers very happy.

The unit is manufactured from tough aluminum alloys for extremely rugged use and is highly polished so it is easy to clean and neat in appearance for years.

The conveniently placed light will help brighten dark corners and closets.

Fast moving parts are electronically balanced for vibration free operation. The entire machine is perfectly balanced to handle smoothly and maneuver well with easy grip handles.

This edger, designed and manufactured in the USA, will give your company years of extremely low maintenance service. All parts are available quickly and inexpensively.

The SL-7 is also available in a 220-volt version, which will cut and finish a floor even quicker than the 110-volt model.

### **The SL-7D**

The SL-7D is the newest edger from Silver-Line. This machine was designed without casters to be used on soft woods. The nylon bar glides along the floor eliminating wheel marks left by standard casters. (Standard casters come with the SL-7D for the times you want to use them)

Due to its unique design, the SL-7D cuts a flatter pattern on the floor. Because the machine is closer to the floor, the dust pick up is increased, and it becomes a DUSTLESS edger.
